

C Programming Project Proposal

Project title: ATM system

Simple banking/ATM system in C and C++ that have several basic banking features

Team members:

Thanat Suppagornmongkol 64011669

Kittiphong Thachaphat 64011433

Akararat Pattanamontri 64011331

Project Description:

The ATM system will come with a login feature to verify the user. After the login, the user will be greeted with a menu. Which will offer many functions such as managing his/her account. This includes checking his/her balance, withdrawing and depositing money, transferring money to other specified account, the user will also be able to change the passcode (PIN) of the user's account. After that, the user can exit the program and the program will close itself.

User will be able to interact with the program via keyboard. The program will not support cursor interaction. User's information will be stored in dedicated text files which the program will be able to access and edit depending on the user's input. The program will be coded in C and C++.
